

Registering a smart device or appliance on the network

Unlike your computer or mobile device, certain devices such as smart televisions, game consoles, and streaming appliances (AppleTV, Roku, etc.) may not support the 802.1x network authentication used on the UALR-WiFi network and certain wired public network ports. These devices may instead be registered prior to joining the network in order to join either the UALR-IoT wireless network or connect to a wired public port.

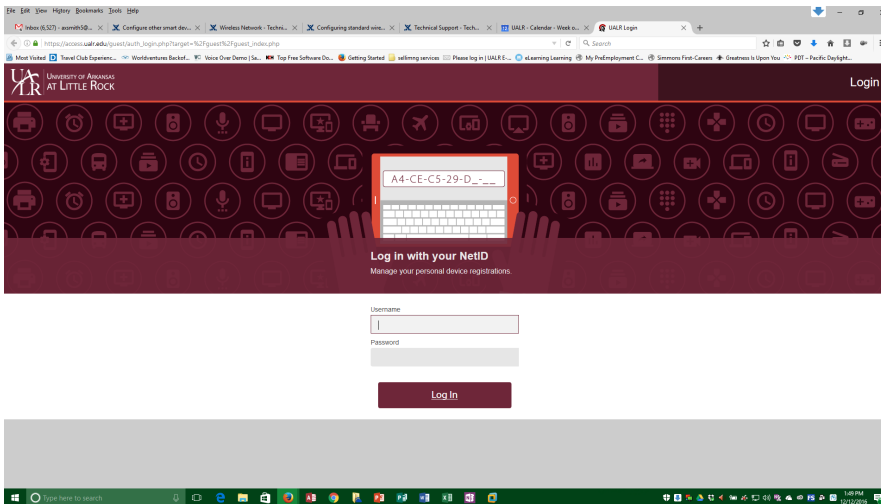

Device Registration Site

access.ualr.edu

Step-by-step guide

Follow these instructions to register your smart devices or appliances on the campus network.

1. On a computer already connected to the campus network, visit the [network device registration site](#) and log in. A list of previously registered devices (if any) will appear on the Manage Devices page.

Filter:

MAC Address	Device Name	Expiration
00-00-00-00-00-01	my television	2017-07-15 12:00
00-00-00-00-00-02	test device 2	2017-07-15 12:00

[Add new device](#) | [View active sessions](#)

2. Select *Add new device*. A device registration form will appear.

Add Device

 I am the sponsor of this account and accept the [terms of use](#)

Create

[Manage existing devices](#) | [View active sessions](#)

4. After selecting *Create*, you will see a confirmation page that the device has been created.

Successfully added new device

MAC Address	01-00-00-00-00-03
Account Status	Active
Account Expiration	Account will expire at Saturday, 15 July 2017, 12:00 PM
Username	djs1

[Add new device](#) | [View active sessions](#)

i Once your device is registered, you may now either join the device to the UALR-IoT wireless network or connect it directly to a public wired port.
